

Gym Management System

A modern **Gym Management System** built as a **full-stack web application** to simplify day-to-day gym administration. The system provides a centralized platform for managing members, trainers, attendance, membership plans, and payment records through a secure authentication system and an intuitive dashboard.

This project was developed for **academic and portfolio purposes** to demonstrate full-stack web development skills, database management, authentication, and CRUD operations.

Features

Authentication

- Secure Admin Login
- Session-based authentication
- Protected dashboard access
- Logout functionality

Member Management

- Add new members
- Update member details
- Delete member records
- View all registered members
- Search and filter members

Trainer Management

- Add trainers
- Update trainer information
- Remove trainers
- View trainer details

Attendance Management

- Mark attendance

- View attendance records
- Track member attendance history

Membership Plans

- Create membership plans
- Edit plans
- Delete plans
- View available plans

Payment Management

- Record fee payments
- Track payment history
- View payment status
- Maintain payment records

Dashboard

- Centralized admin panel
- Quick navigation
- Organized management interface
- Easy access to all modules

Responsive Design

- Mobile-friendly layout
- Tablet compatible
- Desktop optimized
- Clean and intuitive UI

Technology Stack

Frontend

- HTML5
- CSS3
- JavaScript
- Bootstrap

Backend

- PHP

Database

- MySQL

Hosting

- InfinityFree
-

Demo Credentials

Username:

admin

Password:

admin123

This is a demonstration account created for portfolio evaluation.

Installation

1. Clone Repository

```
git clone https://github.com/yourusername/Gym-Management-System.git
```

2. Move Project

Copy the project folder into:

xampp/htdocs/

or

www/

depending on your local server.

3. Import Database

- Open phpMyAdmin
 - Create a database
 - Import the provided SQL file
-

4. Configure Database

Update database credentials inside the configuration file.

Example:

```
$host="localhost";  
$user="root";  
$password="";  
$database="gym";
```

5. Run Project

Start:

- Apache
- MySQL

Visit:

<http://localhost/Gym-Management-System>

Learning Outcomes

This project demonstrates:

- Full-stack web development
 - Authentication implementation
 - CRUD operations
 - MySQL database integration
 - Responsive web design
 - Admin dashboard development
 - Session management
 - Form validation
 - Data management
 - Deployment on a live hosting platform
-

Future Improvements

- Member login portal
 - QR code attendance
 - Email notifications
 - Online payment gateway
 - Trainer schedules
 - Workout tracking
 - Diet plan management
 - Analytics dashboard
 - Reports generation
 - Multi-admin support
-

AI Assistance

AI tools were used during development to assist with debugging, code optimization, problem-solving, and implementation guidance. All features were integrated, tested, and customized as part of the development process.
